

VINAY GOUD

Unity Developer

9390315371 | vinayvvv992@gmail.com | [Itch.io](#) | [Portfolio](#) | [Skill City](#)

PROFILE

Unity Developer with 1.7+ years of professional experience in developing games for PC, web, mobile, and XR platforms. Develop and implement gameplay systems, game mechanics, player interactions, and core game features, along with multiplayer gameplay using frameworks such as Photon and Mirror.

WORK EXPERIENCE

XR Developer — EdgeForce Solutions, Hyderabad *Nov 2023 – Mar 2025*

- **Shooting Module:** Programmed a Mirror-networked hostage-rescue demo — real-time shooting, health systems, pathfinding, enemy AI.
- **Digital Circuits (3D):** Built a Unity VideoPlayer trainer for 70+ circuit videos using Scriptable Objects, Service Locator, and Observer pattern to trigger a rotatable, zoomable 3D model whenever a key component appeared mid-video. Core contributor.
- **Gun Handling (MR):** Developed a Meta Quest Pro combat scenario with NavMesh-driven enemies that pursue, engage, and damage the player.
- **Welding Simulation:** Core contributor on the full simulation; implemented corner-pivoted rod mechanics and shader-driven weld marks, optimized with object pooling.
- **Painting Simulator:** Customized a Unity Asset Store tool with heatmap-based paint tracking; co-engineered a spray controller with hardware teams.
- Contributed to an AI chatbot on Meta Quest 3 — pushed data to a local server over WiFi via web requests.

Game Developer — Anahata Interactive *Apr 2026 – Jul 2026*

- **18 Days (in development):** Developed core mechanics for a Photon Fusion strategy game — card-based troop deployment, troop combat and health systems, archer units with parabolic arrow trajectories, and Firebase-backed save data with Google sign-in.
- **Froggy (in development):** Building a platform-jumping game with a parabolic trajectory preview for landing spots, plus a coin-collecting score system.
- Developing WebGL titles Wavytrip and Grass Cutter.
- Integrated Google AdMob across Anahata's Android titles.

PERSONAL PROJECTS

- **Coconuts Vs Nothing** — Multiplayer clone of Coconut Simulator built with Photon PUN 2 for web (WebGL), featuring real-time scoreboard and chat, published on itch.io.
- **Space Chaos** — 2D space shooter, published on itch.io.
- **Happy Town, Hopeless, Pass Through, Battle Royale, Touch Me** — diverse titles spanning arcade, simulation, and action genres.
- **Laws of Newton** — VR educational simulation focused on physics-driven mechanics and immersive learning.
- **Wisdom Tales** — published on Google Play Store (later delisted); interactive storytelling for young audiences.

SKILLS

- **Languages:** Proficient in C#
- **Game Engines:** Unity (Primary), Unreal (Basic)
- **Multiplayer:** Photon PUN 2, Photon Fusion, Mirror, Netcode for GameObjects
- **XR / VR / MR:** XR Interaction Toolkit, OpenXR, Mixed Reality (Meta Quest Pro)
- **Core Concepts:** OOP, Design Patterns, Scriptable Objects, Service Locator, Observer Pattern, Object Pooling, FSM, AI/NavMesh Pathfinding, Addressables, Shader Effects
- **Platforms:** Mobile (Android/iOS), Desktop (Windows), WebGL, VR/MR (Quest, PC VR)
- **Tools:** Git, GitHub

EDUCATION

MSc — Game Technology | 2021 – 2023

ICAT College, Bangalore (Alagappa University)
